Subject: NJ Drinking Water Quality Institute Recommends 14 ng/l MCL

FYI - the [New Jersey Drinking Water Quality Institute](#) publicly released its recommendation to NJDEP for PFOA at 14 ng/L. More information at:

- [Health-Based Maximum Contaminant Level Support Document: Perfluorooctanoic Acid \(PFOA\)](#)
- [Report on the Development of a Practical Quantitation Level for Perfluorooctanoic Acid \(PFOA\) in Drinking Water](#)
- [Addendum to Appendix C: Recommendation on Perfluorinated Compound Treatment Options for Drinking Water](#)

There is a meeting on September 22nd. Following that we would expect a formal referral from the institute with a recommendation to the NJDEP for a MCL. The next step would be determination by the Department if it would move forward to adopt as a MCL through rule making.
